

E.COOLINE PowerDog SX3 cooling blanket

PRODUCT DESCRIPTION

The E.COOLINE Powercool SX3 BigPad protects employees at heat and heat workplaces, office workers as well as athletes and private individuals from the health effects of heat:

- lowers the body temperature to a normal physiological level,
- improves concentration and performance,
- consists of a 3 D system with smart fibers, which by activation with water causes a temperature-dependent significant cooling effect up to 660 watts,
- stabilizes body temperature to prevent fatigue and cardiovascular problems
- with a physiological temperature of up to 12°C, which is perceived as pleasant.
- enables large-area cooling while sitting or during recovery/regeneration.

PRODUCT BENEFITS

- Fastest activation without preparation (saving of working time)
- Dry inside and outside, pleasant surface instead of hours of humidity/wetness
- Washability (machine) with detergent and thus hygienic application
- 100% climate-neutral product and technology Made in Germany
- Multifunctional use

PRODUCT INSTRUCTION

E.COOLINE products

- are activated evenly with water in a few seconds and can be put on immediately.
- Washing instructions: Wash separately. Dry cleaning @, machine wash or hand wash (30°C) with pH neutral detergent. Do not tumble or spin dry, do not use functional or color detergent that does contain fiber protection, no bleaching.
- Industrial washing according to instructions.
- To dry completely, simply hang in an airy space.
- Storage: in a dry place with air exchange.
- Please keep kidney area free from cooling!

Please note the instructions attached to the product!

Article number 27109001

HS-Number 63079098

Size (unisex) 100 x 50 cm

Packing

BigPad per piece packed in plastic bag with zipper and instructions.

TECHNICAL DATA

The 3D- high-tech fleece made of polyester is able to store 1-2 liters/m² of water. There is no condensation when properly activated when worn and there are no water drops on the clothes. Body and clothes of the user remain dry.

The contained water cannot be squeezed out, it escapes only by evaporation, physically producing evaporative cooling. Due to the large surface of the 3D fleece, this effect is significantly higher than with other materials.

In the field of medical applications, the product has CE Class 1 certification in Europe.

- outer fabric: Oekotex 100
- Größen: one size 100x50 cm
- colors: blue (col-no. 100)
- 2 layer material: outer material: 100% Polyester,
- core material: 100% COOLINE® Polyester: 100% COOLINE®
- outer fabric antibacterial due to DEOXX fresh (natural silver ions, complies with BPR EU Regulation No. 528/2012) for hygienic reasons
- siliconfree version

Cooling effect confirmed by
HOHENSTEIN
Test No.: 22.1.11.0048
DIN SPEC 60015

TESTS AND STUDIES

*Thermoman® is a registered Trade Mark of E.I. du Pont de Nemours Company

E.COOLINE WAS TESTED BY EMPA IN ST. GALLEN UNDER EXTREME CONDITIONS

The "Thermoman" study conducted by the national research institute Empa - Materials Science and Technology in St. Gallen confirmed the cooling effect of COOLINE. The areas of the body protected with COOLINE showed a lower temperature rise than the areas that were not protected with the new high-tech fleece.

SPORTS SCIENCE PROVES 110% PERFORMANCE

Heat limits human performance at work because the heat-related effects cause 90% of energy to be spent on temperature regulation such as sweating, in addition to an increased heart rate.

This leads to lower concentration and performance. In addition to an increased risk of accidents as a result, there are also health problems due to exhaustion syndromes and a higher cardiovascular load.

In a randomized study conducted by the Universities of Münster and Dortmund, athletes were able to increase their performance up to 110% at 30°C.

Important body parameters such as heart rate and lactate values were significantly improved.

USER REPORTS IN NUMEROUS COMPANIES AND INDUSTRIES WITH IR CAMERA PROVE THE SIGNIFICANT TEMPERATURE REDUCTION

HEAT STRESS MEASUREMENT AT 43°C AMBIENT TEMPERATURE

TEST PERSON AT NORMAL TEMPERATURE
Ø 31,7°C average temperature body surface

TEST 1: WITH COOLING

Ø 29,3°C average temperature body surface

Conclusion: The test person with cooling achieved the same low temperatures at head and upper body as in normal ambient temperatures. With increased temperatures of +6.6°C the same test person exceeds without cooling vest temperatures which are conducive to health and performance and represent a health risk. On the long run, this may lead to health problems and lack of performance.

TEST 2: WITHOUT COOLING

Ø 35,9°C average temperature body surface
